PROJECT ON

Notes App

Developed By

- 1. Hamza Deleon Wiradarma**
- 2. Fajar Fathurrachman**

The logo for NIIT (National Institute of Information Technology) is displayed in a bold, blue, serif font. The letters are thick and blocky, with a slight shadow effect.

Notes App

Batch Code : 4FSD1

Start Date : 20 March 2026

End Date : 7 April 2026

Name of Faculty : Indah Ayu Yuliana

Name of Developer :

1. Hamza Deleon Wiradarma
2. Fajar Fathurrachma

Date of Submission : 6 April 2026

CERTIFICATE

This is to certify that this report titled “Notes App” embodies the original work done by Hamza Deleon Wiradarma and Fajar Fathurrachman. Project in partial fulfillment of their course requirement at NIIT.

Coordinator :

Indah Ayu Yuliana

ACKNOWLEDGEMENT

All praise is due to Allah SWT. We are grateful for the patience and capability necessary to finish this assignment on time about the “New Student Admission”

Completing this project could not be possible without the help, guidance, and encouragement of Indah Ayu Yuliani., S. T., M. M. The authors would like to thank Indah Ayu Yuliani., S. T., M. M and our colleague at the CEP CCIT who helped us with this project.

The authors also wrote this paper to demonstrate the author's ability to work in teams. This project is open to suggestions and constructive criticism, which would help it improve. The last set of terms of reference for the readers in general, The authors hope this project can help the readers gain understanding and knowledge from this project.

SYSTEM ANALYSIS

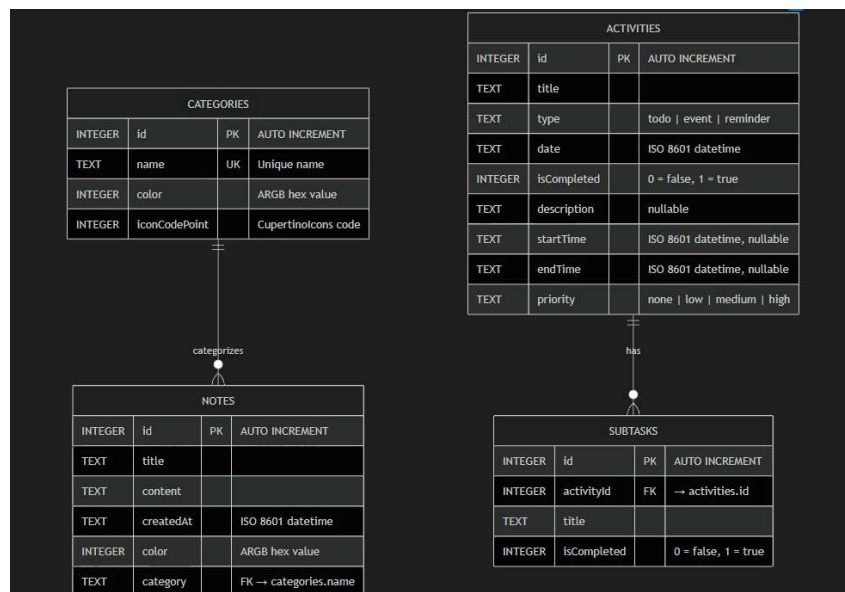

System Summary :

This app is a mobile-based platform for managing notes and daily activities (Notes & Activities) developed using the Flutter framework. The system is designed to help users efficiently manage, categorize, and track their routines and ideas through a modern interface (Material Design) featuring clean Montserrat typography. Key features of this app include a home screen (main dashboard), calendar integration for visual schedule tracking (calendar_screen), and an intuitive module for adding notes and activities along with their respective categories. From a data architecture perspective, this software fully supports offline use by utilizing SQLite (sqflite via database_helper.dart) as the local database storage mechanism, ensuring security, access speed, and data persistence directly on the user's device without requiring an internet connection.

ACTIVITY LIST

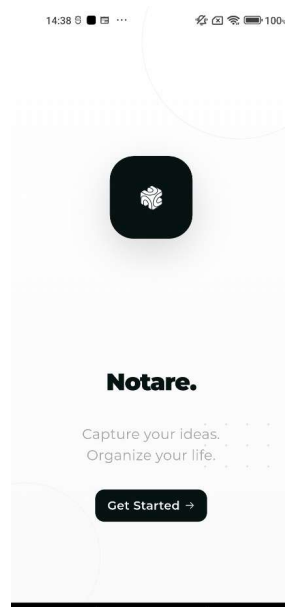

No	Activity Description	Planned Date of Completion	Actual Date	Responsibility	Remarks
1	Creating Home Page	30 March 2026	30 March 2026	Hamza Deleon	
2	Creating Navigation Bar	30 March 2026	30 March 2026	Hamza Deleon	
3	Creating Notes Page	31 March 2026	1 April 2026	Fajar Fathurrachman	
4	Making Dummy data	31 March 2026	1 April 2026	Hamza Deleon	
5	Making Category List	31 March 2026	2 April 2026	Fajar Fathurrachman	
6	Creating Calendar for todo, events, and reminder	2 April 2026	3 April 2026	Fajar Fathurrachman	
7	Creating Database	4 April 2026	5 April 2026	Hamza Deleon	
8	Implement Database to project	4 April 2026	5 April 2026	Hamza Deleon	

FLOW DESIGN OF APPS

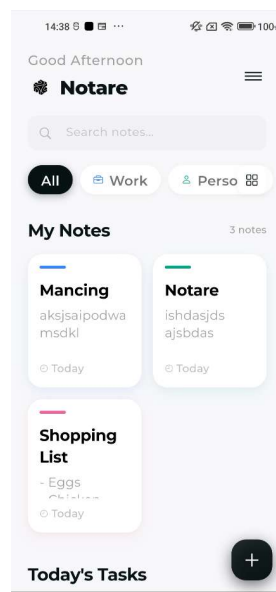

PREVIEW OF APPS

1. displays the splash screen of a mobile application named "Notare," which functions as a sleek digital note-taking and productivity tool.

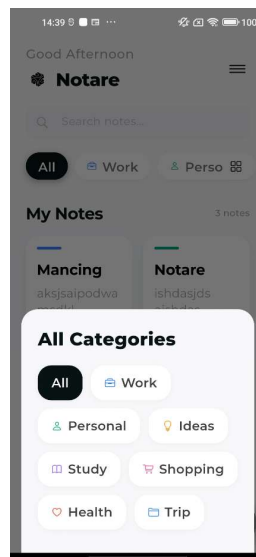

2. displays the main dashboard of the Notare app, which functions as a centralized workspace for users to organize categorized notes and manage their daily tasks.

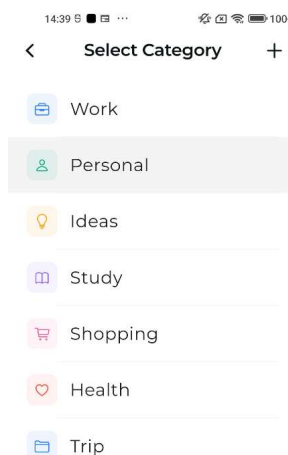

PREVIEW OF APPS

3. displays a category selection menu within the app, which functions as a filtering system allowing users to easily organize and quickly access their notes by specific topics like work, study, or health.

4. displays a "Select Category" screen, which functions as a menu for users to assign a specific label to a new or existing note or task for better organization.

PREVIEW OF APPS

5. displays the “New Note” creation screen, which serves as a text editor for users to start writing and saving new notes under specific categories such as “Work.”

Personal

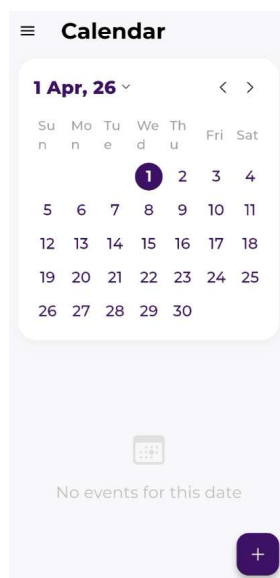

PREVIEW OF APPS

7. displays a slide-out navigation menu, which functions as a quick access panel for users to easily switch between the main dashboard and a calendar-based view of their notes.

8. displays a calendar interface, which functions as a scheduling tool for users to organize, view, and add daily events or date-specific notes.

PREVIEW OF APPS

9. displays a date selection menu, which functions as a quick navigation tool for users to easily jump to a specific month and year within their calendar.

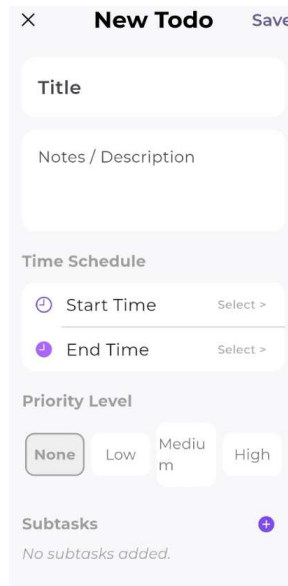

10. displays a context menu that serves as a quick-action panel, allowing users to add new tasks, events, or reminders specifically to the selected calendar date.

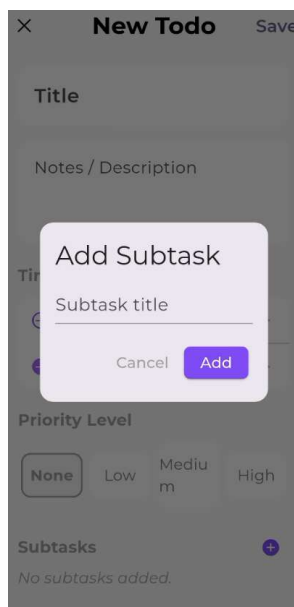

PREVIEW OF APPS

11. displays a "New Todo" screen, which functions as a detailed form for users to create a new task complete with a time schedule, priority level, and subtasks

The screenshot shows a mobile app interface for creating a new task. At the top, there is a header bar with a close button (X), the title "New Todo", and a "Save" button. Below the header, there are two text input fields: "Title" and "Notes / Description". Underneath these fields is a section titled "Time Schedule" containing two rows: "Start Time" and "End Time", each with a clock icon and a "Select >" button. Below the time schedule is a "Priority Level" section with four buttons: "None", "Low", "Medium", and "High". At the bottom, there is a "Subtasks" section with the text "No subtasks added." and a plus icon to add subtasks.

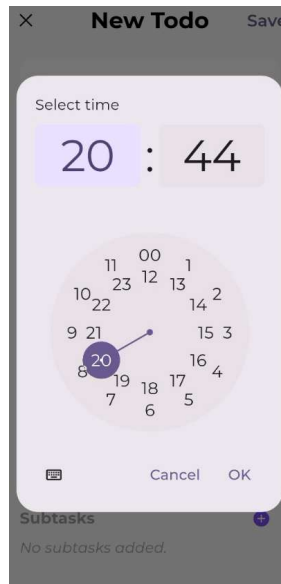

12. displays an "Add Subtask" pop-up dialog, which functions as an input field for users to break down a main task into smaller, manageable steps

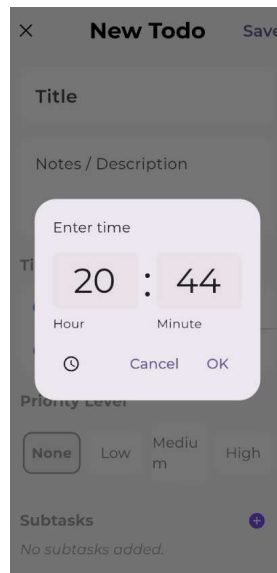

The screenshot shows the same "New Todo" screen as in the previous image, but with a "Add Subtask" pop-up dialog overlaid in the center. The dialog has a title "Add Subtask" and a text input field labeled "Subtask title". At the bottom of the dialog, there are two buttons: "Cancel" and "Add". The background of the app screen is dimmed to show the dialog clearly.

PREVIEW OF APPS

13. displays a time picker dialog box, which functions as an interface for users to precisely set a specific start or end time for their scheduled task.

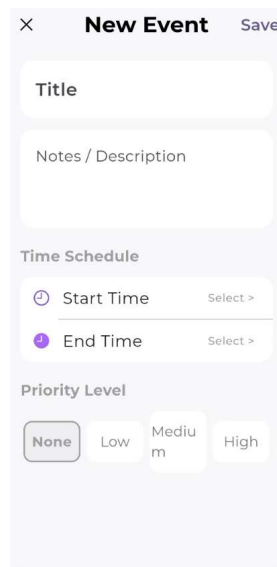

14. displays a manual time entry dialog box, which functions as a direct keyboard-input alternative for users to quickly type the exact hour and minute for their scheduled tasks.

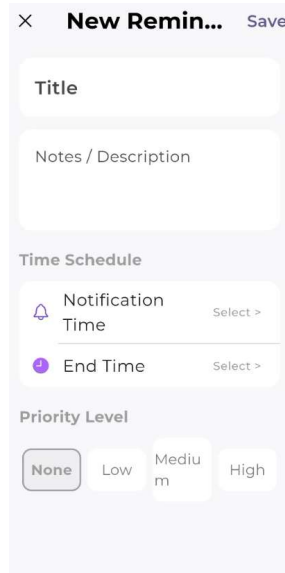

PREVIEW OF APPS

15. displays a "New Event" screen, which functions as a dedicated form for users to schedule and detail upcoming calendar events with specific timeframes and priority levels.

A mobile app screen titled "New Event" with a close button (X) and a save button. The form includes a "Title" input field, a "Notes / Description" text area, and a "Time Schedule" section with "Start Time" and "End Time" pickers. At the bottom is a "Priority Level" section with buttons for "None", "Low", "Medium", and "High".

16. displays the "New Reminder" screen, which serves as a form for users to create a new reminder, complete with notification timing and priority settings.

A mobile app screen titled "New Remin..." with a close button (X) and a save button. The form includes a "Title" input field, a "Notes / Description" text area, and a "Time Schedule" section with a "Notification Time" picker and an "End Time" picker. At the bottom is a "Priority Level" section with buttons for "None", "Low", "Medium", and "High".

CONFIGURATION

Hardware : HP Pavilion 15

Operating System : Windows 11

Software : Flutter & Dart

PROJECT FILE DETAILS

No	File Name	Remarks
1.	lib/data/database_helper.dart	singleton DatabaseHelper class in Flutter that manages SQLite database initialization, schema creation, upgrades, and CRUD operations for notes, activities, subtasks, and categories.
2.	lib/models/activity_model.dart	Activity and SubTask data models in Flutter with enums, database serialization methods, and helper properties for UI representation such as colors and progress calculation.
3	lib/models/note_models.dart	Note data model in Flutter with properties, default values, and methods to convert between object and map formats for database storage.
4.	lib/screen/add_activity_screen.dart	AddActivityScreen that provides a user interface to create and save activities with details like title, description, time, priority, and optional subtasks into a local SQLite database.

CONFIGURATION

PROJECT FILE DETAILS

No	File Name	Remarks
5.	lib/screen/add_note_screen.dart	AddNoteScreen that allows users to create, edit, delete, and save notes with customizable colors and categories using a local SQLite database.
6.	lib/screen/calender_screen.dart	CalendarScreen that displays a custom monthly calendar, allows users to add, view, update, and delete activities (todos, events, reminders), and syncs them with a local SQLite database.
7.	lib/screen/category_selection_screen.dart	CategorySelectionScreen that lets users view, select, and add note categories dynamically using a local SQLite database.
8.	lib/screen/home_screen.dart	HomeScreen that displays, searches, filters, creates, edits, and deletes notes with category management and animated UI, all synchronized with a local SQLite database.
9.	lib/widgets/navigation_widgets.dart	NavigationWidgets drawer that provides navigation between the Home screen and Calendar screen using route replacement.
10.	lib/main.dart	The Flutter entry point that configures the theme, status bar, and font, and runs the HomeScreen as the app's main screen.
